Project Title: Sumikko Gurashi Website

I'd like to build this website as a database that contains all the central information regarding the Sumikko Gurashi mascot series characters. There would be a nav at the top for all the pages. The target audience would be those that have come across the characters before and are interested in learning more about them.

- **Home page** – introducing the audience to the background of the main characters and their individual personalities

- **All characters** – includes details on the more minor characters of the collection

- **Media projects** – about the various media projects that have been made of the characters, including a couple movies

- **Product lines** – a non-exhaustive list / survey of the prominent product lines Sumikko Gurashi have featured in, with links to where they can be purchased (if relevant)

- **History** – a detailed overview of how the characters came to be and their role within their company's brand

- **Sources** – a page to credit the wiki and any other sources used
